As Novawood, we set out to transform the weaving texture of the “tree” into the texture of “life”. Our aim was to transform the most beautiful gift of nature into living spaces that breathe. At the point we have reached today, we feel that we are bringing the nature one step closer to humans through each new design developed.

While trying to preserve the forest richness of our world with the sustainable solutions, we embrace the “long life span” as the most important brand value of our products.

We are inspired by the nature itself in terms of harmony and aesthetics, and we preserve our products with the most advanced thermal modification method “Thermowood” for ultimate “durability” and “endurance”.

We have a justified pride in our position as being the first company introducing the termal modification technology “thermowood” in Turkey. We develop and direct every stage of the production process with innovative approaches which add value to the life. We strive to reinforce the wood products and wooden materials, which we regard as living materials, without compromosing the aesthetics and naturalness of the product.

Our aim is to offer the precious gifts of the nature by preserving them in their most natural state.

‘Nature cannot be considered apart from us, it is part of us.’

NOVAWOOD

A young child with curly hair is shown in profile, smelling a bouquet of white roses. The child is wearing a light-colored dress with a floral pattern. The background is a wall made of horizontal wooden slats. The overall mood is peaceful and natural.

NOVA PI-FIX SYSTEM

novawood[®]
INTERIORS

NOVA PI-FIX

It is a plastic mounting element with an aluminum carcass (with base) used in carcass assembly that allows local change and renewal. The product is used for fixing various ceiling wooden boards on the carcass at desired distances. Using an additional measuring equipment such as a template for the distance adjustment on the wood will provide ease of assembly. This setting can be changed flexibly after installation, in all sizes, when assembled.

DIMENSIONS			
Wood Specie	Thickness (mm)	Width (mm)	Length (mm)

PEFC: The Sustainable Forest Management Certificate ensures that forests are managed in accordance with challenging environmental, social and economic requirements. The PEFC Chain of Custody certification allows to demonstrate the legal and sustainable source of forest products.

International ThermoWood Association: This certificate confirms the membership of the association and ensures that the production of the process follows ThermoWood process and the manufactured products fulfil the requirements set in the CEN/TS 15679 Thermal Modified Timber-definitions and characteristics.

TSE: This certificate confirms that the Novawood's activities and productions are in accordance with Turkish standards, meanwhile it shows that the production place of certified products meet the requirements of the institute.

ISO: This Certificate confirms that Novawood implements the requirements of standard management system.

EPD: Novawood took a step forward towards sustainability by obtaining the EPD certificate. Now you can choose the most sustainable product for your green buildings and you can optimize the impact of Novawood products for carbon transparency. EPDs support carbon emission reduction by making it possible to compare the impacts of different materials and products in order to select the most sustainable option.

CE: This Certification ensures that the manufacturer or importer affirms the good's conformity with European health, safety, and environmental protection standards.

ISO 14001: This Certificate confirms that Novawood implements the requirements of standard management system.

FC: FC certification approves the production methods, quality assurance and test results assessed and verified by Finotrol Oy.
